School Website Sales & Planning Guide

A practical guide based on our discussion about building and selling school websites in Nepal.

1. School Website vs. Facebook Page

A school can benefit from having both. A website works as the school's official information hub, while Facebook works mainly as a social-media and communication channel.

School Website	Facebook Page
Official, permanent online presence	Social-media presence
Information can be organized into pages	Information mainly appears in posts
Good for admissions, notices, forms and downloads	Good for photos, videos and announcements
Custom school domain and branding	Depends on Facebook's platform
Can be accessible without a Facebook account	Users generally need Facebook for full access
School has more control over design/content	Facebook controls the platform

Advantages of a website: professional image, organized information, better support for parents/new students, permanent notices and documents, greater control, and the ability to add online services such as admission forms, results links, downloads and portals.

Disadvantages: domain/hosting/development costs, regular maintenance, less natural social engagement than Facebook, and the risk of looking outdated if the website is not maintained.

Best approach: Website = official information hub; Facebook = social media and communication. Link the two together.

2. Suggested Website Pricing in Nepal

Website type	Typical features	Suggested price
Basic	4–5 pages, contact, gallery, school information	Rs. 10,000–15,000
Standard	6–10 pages, notices, events, gallery, admission information, responsive design	Rs. 20,000–30,000
Professional	Modern design, notices, events, admission forms, CMS/admin, basic SEO	Rs. 35,000–50,000+
Advanced	Student/parent portal, results, database, admin dashboard	Rs. 60,000–1,00,000+

For a first school project, a practical starting price is around Rs. 20,000–25,000. A sample Rs. 25,000 package could include a modern responsive design, Home, About, Principal's Message, Teachers/Staff, Classes, Notices, Events, Gallery, Admission, Contact/Maps, Facebook integration and one month of support. Charge separately for domain, hosting and major future changes.

Sales tip: sell the result, not just the coding. Say that you are creating an official digital platform where parents and students can easily find admissions, notices, events, contact details and other important information.

3. What to Add to a School Website

Home Page

School name/logo, hero section, admission button, introduction, latest notices, upcoming events, principal's message, quick links and contact information.

About the School

History, vision and mission, objectives, principal's message, facilities, achievements and school policies.

Teachers & Staff

Photo, name, position, subject/department and qualification.

Academics

Classes, subjects, curriculum and academic calendar.

Notices

Exam notices, holidays, admissions, announcements, result announcements and downloadable PDFs. Each notice can show title, date, description and download link.

Online Admission

Student details, date of birth, class, guardian information, phone, previous school, address, document upload and application submission.

Gallery

Events, sports, tours, annual programs, festivals and classroom activities.

Events

Upcoming school events with dates and descriptions.

Achievements

Academic, sports, competition, awards and student achievements.

Facilities

Computer lab, science lab, library, transportation, playground, cafeteria, smart classrooms, security and first aid.

Contact

Address, phone, email, Google Maps, contact form, opening hours and Facebook link.

4. Features That Can Increase the Website's Value

Student/Parent Portal: login for results, attendance, notices, homework, exam routines and announcements.

Admin Dashboard: allow school staff to add notices, events and gallery items without contacting the developer every time.

Results System: if the school already has a result platform, link to it instead of replacing it.

Downloads: admission forms, exam routines, academic calendar, prospectus, notices and syllabus.

Mobile-first design: make the website work well on phones, tablets and computers.

5. Recommended Website Structure

HOME → ABOUT → ACADEMICS → FACILITIES → TEACHERS & STAFF → ADMISSIONS → NOTICES → EVENTS → RESULTS → GALLERY → DOWNLOADS → CONTACT

6. How to Convince a School That Already Has a Result Website

Do not tell them they need to replace their existing result system. Position your website as the school's complete online information and communication platform.

Suggested message: “Your existing result system is useful for results, but it doesn't replace an official school website. I can create a website that brings your school's information, notices, admissions, events, facilities, teachers, gallery and result link together in one professional platform.”

The difference: a result website is mainly for checking marks/results; your website can provide complete school information, admissions, notices, events, gallery, staff, facilities, branding and contact information.

Practical setup: School Website → Admissions | Notices | Events | Gallery | Staff | Facilities | Contact → Check Results → Existing Result System. This adds value without competing with the school's current system.

Strong selling point: “I'll make your school easier to discover and more professional online.”

You can offer a complete package including a custom school website, mobile-friendly design, notice system, admission information/form, school profile, staff directory, gallery, achievements, events, downloads, Google Maps, link to the existing results, Facebook integration and basic Google SEO.

Recommended pitch: “Sir/Ma'am, I noticed the school already has an online result system, which is good for students. I'm not proposing to replace that. I can create an official school website that works alongside it. Parents can use the website to learn about the school, admission, teachers, facilities, notices and events, while the existing system can continue handling results. It would give the school a professional online presence and make important information much easier to find.”
